**Exercise #1: Fundamentals of HTML**

In this assessment, you will practice applying HTML tags to develop the structure and content of a simple webpage.

The website will be tested using the **Chrome** browser.

**Submission Instructions**

1. Create a zip file that contains:
   a. Your completed HTML file.  Name your HTML file `ex1_firstname.html`. For example: `ex1_michelle.html`.
   b. A screenshot of your entire webpage (submit a png or jpg file)

2. Name your zip file `ex1_firstname.zip`,example: `ex1_michelle.zip.`  No rar or 7zip file accepted.

3. Submit the zip file to the assignment dropbox.

**Academic Integrity**

This is an **individual assessment** and must be completed without the assistance of others.

*Allowed:*
   ● You may use the Internet to search for HTML syntax. If you are using Internet resources for HTML syntax, ensure that the content of these resources align with the content presented in class.

*Not allowed:*
   ● Following step-by-step tutorials
   ● Posting assessments to homework help websites, such as Chegg or CourseHero
   ● Exchanging solutions or resources

**Problem Description**

You are a software developer manager at a company. The company has asked you to create an employee profile page.   See course webpage for the expected user interface of the webpage.

The webpage must have three sections:

1. **<u>Employee Portal Section</u>**:  This section of the website shows the title of the website and **unordered** list three navigation links. You may customize the text of the links.

2. **<u>Employee Profile Sectio</u>n**:  This section displays:
   a. your photo, name, and office location (you can use a fictional location).
      i. Use photo editing software to adjust the size of your photo so it appears nicely on your page. Do **<u>not</u>** use **width** or **height** attributes.
   b. description about yourself
   c. table displaying 3 employees who report to you. Each employee has a name and a job title
      i. Each employee's name should be a link
      ii. You must customize the names and job titles.
   d. vacation request form.
      i. The "vacation start date" field should be implemented using a **date picker input element**. You may need to perform research to locate this element.
      ii. Any form label text must be implemented using <label> element.
   e. heading text for the list of employees and the vacation request form

3. **<u>Footer section</u>**: Located at the bottom of the page and contains navigation links. You may customize the text of the navigation links.

**Technical Requirements**
- Webpage must be implemented using HTML tags only.
  - Do not use *semantic* tags
  - Do not use CSS
- You are responsible for selecting the most appropriate HTML elements
- You may use the <hr/> tag to create a visual separation between each section of the webpage
- Clicking on links does not do anything (HINT: use <a href="#">)
